I am a truck driver and XM radio delivers to me weather information that is very critical to me when I need it. The importance of hi-way safety should be enough to keep XM weather on the air. Have you ever tried to get weather information going down the road and all you get is commercials, How about trying to find a radio station going 65 mph in heavy traffic on a bad day in heavy rain or the threat of snow! What better way Than XM radio is their to get this information when you need it anywhere your are.

Reject NAB Petition 04-160 Think You.
